

Vic Cameleers: SEO & Design Report to Rank #1 in Melbourne

Sep 26, 2026 · @Raghav Mahajan

Design, visual effects and the master Claude Code prompt are in the second tab:

Design and Motion Playbook

Executive summary

The site's s

☐		

tructure and copy are already better than most competitors, but it cannot rank today because it is still on a vercel.app address and its sitemap, robots.txt and schema all point to `http://localhost:3000`. Google literally cannot find the pages it is being told about. Fix the plumbing this week, then the race is won on Google Business Profile, reviews and real local proof, not on more pages.

One honest reality check: the first three results in the search you screenshotted are **paid ads**, not SEO. "Number one" for "Melbourne moving company" means three different battles: the ads slot (money), the Google Maps 3-pack (Business Profile + reviews + distance), and the organic blue links (website + links). A new Cranbourne business can realistically win the Maps pack and organic top 3 for south-east suburbs (Cranbourne, Clyde North, Berwick, Pakenham) within 3 to 6 months. Winning the generic "removalists Melbourne" head term against Man With A Van (733 reviews, trading since 2001) is a 12 to 24 month job.

The 10 moves that matter most, in order:

1. Buy and connect a real `.com.au` domain, set it as the primary domain in Vercel, and 301 redirect `vic-cameleers.vercel.app` to it.
2. Fix the site URL environment variable so sitemap, robots.txt, canonical tags and JSON-LD use the real domain, not `localhost:3000`.
3. Remove the public "Draft content... needs an owner check before this page goes live" notice from every suburb page.

4. Take `/ops-dev-7f3k` out of robots.txt. It advertises the hidden admin console to anyone who reads the file. Protect it with auth and `noindex` instead.
5. Create and verify a Google Business Profile as a service-area business based in Cranbourne, primary category "Moving company".
6. Get the first 20 Google reviews in the first 60 days with a text-message review request after every job.
7. Replace every placeholder with real photos of the trucks, crew and actual jobs. The site currently has zero images.
8. Rebuild suburb pages so each one says something true and specific to that suburb, starting with the 8 closest to Cranbourne. Cut or merge the rest until they can be done properly.
9. List the business on 15+ Australian directories with identical name, phone and area details (NAP consistency).
10. Earn local links: Casey and Cardinia business networks, real estate agents in Clyde North and Cranbourne, local sports clubs, AFRA membership if eligible.

Audit of vic-cameleers.vercel.app

Checked live on 26 September 2026 by fetching the pages, headers, robots.txt and sitemap directly. Security headers (CSP, HSTS, X-Frame-Options) are excellent. The problems are almost all SEO plumbing, thin local content and missing proof.

What is already good

- Clear title and meta description on the homepage: "Melbourne Removalists | Vic Cameleers".
- Honest, specific pricing (\$120/hour, 2 hour minimum, 45 minute call-out) and an instant estimate widget. Most competitors hide price. This is a real differentiator.
- Solid page set: 6 service pages, 21 suburb pages, 5 guides, FAQ, legal pages. 46 URLs in the sitemap.
- `MovingCompany` and `FAQPage` schema already exist.
- ABN and ACN in the footer, which builds trust.
- The camel and Burke and Wills origin story is genuinely memorable. Use it more, not less.

Critical issues (fix before anything else)

Issue	What was found	Fix
No real domain	Site only lives on <code>vic-cameleers.vercel.app</code>	Buy <code>viccameleers.com.au</code> (or similar), set as primary in Vercel, 301 the vercel.app URL
Sitemap points to localhost	Every <code><loc></code> in <code>/sitemap.xml</code> is <code>http://localhost:3000/...</code>	Set <code>NEXT_PUBLIC_SITE_URL</code> (or <code>metadataBase</code>) in Vercel production env and redeploy
robots.txt points to localhost	Sitemap: <code>http://localhost:3000/sitemap.xml</code>	Same env fix
Schema URL is localhost	JSON-LD <code>"url": "http://localhost:3000"</code>	Same env fix
No canonical tags	No <code><link rel="canonical"></code> on any page checked	Add <code>alternates.canonical</code> in Next.js metadata for every route
Draft notice is public	Suburb pages show "Draft content: the local details on this page... need an owner check before this page goes live"	Remove it. It tells Google and customers the page is unfinished
Admin path leaked	robots.txt contains <code>Disallow: /ops-dev-7f3k</code>	Remove the line. Protect the route with auth, return 404 when logged out, add <code>noindex</code> header
No Open Graph tags	No <code>og:</code> meta at all	Add <code>og:title</code> , <code>og:description</code> , <code>og:image</code> (real truck photo, 1200x630) so links look good on WhatsApp and Facebook
Zero images	Homepage has 0 <code></code> tags	Real photos with descriptive alt text and file names

Important issues

- **Duplicate brand in titles.** Suburb titles render as "Removalists Cranbourne | \$120/hour | Vic Cameleers | Vic Cameleers". The title template is appending the brand twice.

- **Thin, templated suburb pages.** Each suburb page is one template with the name, postcode and council swapped. Google's spam policy lists pages "targeted at specific regions or cities that funnel users to one page" as doorway abuse ([Google spam policies](#)). The June 2026 spam update kept doorway and scaled content abuse in scope ([Digital Shift Media](#)).
- **Backdated guides.** Guides are dated 1 to 29 January 2026, before the business was trading. If that is not true, change to real publish dates. Fake dates hurt trust.
- **Placeholder copy on About.** "Real photos of the truck and crew are going up as we get them" reads as unfinished.
- **Empty reviews page.** "No reviews here yet" is honest but it is a dead end. Until reviews exist, remove it from the nav or turn it into a "How we earn reviews" page linking to the Google profile.
- **Every page is uncached.** Response header is `cache-control: private, no-cache, no-store`, so every page is rendered on each request. Make marketing pages static (SSG/ISR) for faster load and better Core Web Vitals. The nonce-based CSP is the likely cause; move it to only the routes that need it, or use hashes.
- **No street address, hours, or service radius in schema.** Add `areaServed` as a list of real suburbs, `openingHoursSpecification`, `geo`, `logo`, `image`, and `sameAs` links to the Google profile and socials.
- **No Google Business Profile link, no map, no socials.**
- **FAQ answers hidden in accordions.** Fine for users, but make sure the answer text is in the server HTML (it is in the JSON-LD, check it is also in the DOM).

Competitor teardown

The three top results in the screenshot are Google Ads, so they rank because they pay. Man With A Van is the first organic result and the one to learn from: it wins on reviews, age, real people and real stories, not on page count.

Competitor	How they show up	Pages	Reviews / proof	What they do well	Weakness to exploit
Man With A Van	#1 organic	~72	Schema shows 4.8 stars from 733 reviews; links to Word of Mouth reviews	Since 2001, "Meet the crew" posts with real names, community posts, a Cranbourne expansion post, <code>MovingCompany</code> + <code>AggregateRating</code> + <code>GeoCoordinates</code> schema	Inner-north brand (Abbotsford). Weaker on the south-east growth corridor. No instant price calculator
Okay Movers	Paid ad	~214 pages, 40 posts	Not checked (site blocks bots)	Huge suburb coverage: one page per suburb (Blackburn, Box Hill, Glen Waverley...)	Mostly east and bayside. Mass suburb pages are exposed to doorway and scaled-content risk
EFG Movers	Paid ad	6 pages, 1 post	No review schema	Targets Chinese-speaking customers (bilingual title), Keysborough base, lots of keyword text	Tiny site, keyword stuffing in headings ("removalists near Keysborough, removalist, mover..."), little depth
MoveStar Melbourne	Paid ad + map listing (Doveton, open 24 hours)	1 URL in sitemap	Not in schema	24 hour positioning, truck photos in ad, Doveton is 10 minutes from Cranbourne	Basically a one-page site. Easy to outrank organically

What this tells your brother

- **Reviews beat pages.** Man With A Van has fewer pages than Okay Movers and still wins organic. Its 733 reviews and 25 years of links are the moat.
- **Real humans rank.** Their "Meet the crew" posts (Jack Tandy, Zak Degenhardt and others) are the exact opposite of AI slop. Copy the idea, not the words.
- **The south-east is under-served.** MoveStar (Doveton) and EFG (Keysborough) are the only nearby names and both have thin sites. Cranbourne, Clyde North, Berwick, Officer and Pakenham are the fastest path to page one.
- **Nobody else shows a real price.** Vic Cameleers' \$120/hour calculator is the best conversion feature on any of these sites. Make it the hero.

- **Ads are a separate lever.** If your brother wants to be at the very top on day one, that is a Google Ads budget (Local Services Ads if available for removalists in AU, otherwise Search ads on suburb terms), not SEO.

Keyword strategy and site architecture

Target suburb + service terms close to Cranbourne first, then widen outward as reviews grow. Exact search volumes need to be pulled from Google Keyword Planner or Search Console once the domain is live; the tiers below are ranked by winnability, not by volume.

Tier	Example keywords	Target page	Difficulty
1. Home base	removalists Cranbourne, movers Cranbourne, cheap removalists Cranbourne, Cranbourne moving company	/removalists/cranbourne	Low
1. Growth corridor	removalists Clyde North, removalists Berwick, removalists Officer, removalists Pakenham, removalists Narre Warren	each suburb page	Low to medium
2. Services	furniture removalists Melbourne, same day removalists Melbourne, piano removalists Melbourne, office removalists south east Melbourne	service pages	Medium
2. Price intent	removalist cost Melbourne, how much do removalists charge per hour Melbourne, cheap movers Melbourne	pricing page + cost guide	Medium
2. Long tail	moving from Cranbourne to Frankston, marketplace pickup Melbourne, same day furniture delivery Casey	guides + service pages	Low

Tier	Example keywords	Target page	Difficulty
3. Head terms	removalists Melbourne, Melbourne moving company, movers Melbourne	homepage	Very high (12+ months)

Suburb pages: fewer, better, real

Keep the `/removalists/[suburb]` structure, but each page must pass one test: would a person in that suburb learn something true they could not get from the page next door?

Each suburb page needs at least 4 of these:

- Drive time from the Cranbourne depot (e.g. "about 15 minutes to Clyde North").
- The real housing mix: new estates, townhouses, apartments, older brick homes, and what that means for a move (narrow estate streets, no driveway parking, body corporate rules).
- Local access notes: council parking permits, apartment buildings with loading bays, steep driveways.
- A photo from an actual job in that suburb (with the owner's permission).
- A short job story: "3 bedroom move from Clyde North to Officer, 10 tonne truck, 4.5 hours, \$X."
- A real review from a customer in that suburb, once they exist.
- Nearby suburbs linking out, which already exists.

Start with 8 pages done properly (Cranbourne, Cranbourne East, Cranbourne North, Clyde North, Berwick, Narre Warren, Officer, Pakenham). Merge or `noindex` the rest until they can be made real. Never publish a suburb page that only swaps the name.

Pages to add

- `/services/piano-removals` and `/services/pool-table-removals` (heavy items are high-value and the 10 tonne truck is a selling point).
- `/services/marketplace-pickups` (Facebook Marketplace and Gumtree pickups: very common search, perfect for the 6 tonne truck).
- `/services/end-of-lease-moves` or a strong guide on it (renters are the biggest customer group).

- `/guides/removalist-cost-melbourne` rewritten with real job examples and a worked price table from their own jobs.
- `/crew` or "Meet the crew" posts with real names and photos, each linked from About.

On-page rules for every page

- One `<h1>` containing the main keyword naturally.
- Title under 60 characters: "Removalists Clyde North | From \$120/hr | Vic Cameleers".
- Meta description with price, suburb, and a call to action.
- Internal links: every suburb page links to 2 to 3 services and 3 to 5 neighbouring suburbs; every guide links to the quote page and one service.
- Breadcrumb schema on all inner pages.

Google Business Profile, reviews and citations

For a local mover, the Google Business Profile will drive more calls than the website. Google says local results are based mainly on relevance, distance and prominence, and that more reviews and positive ratings can help local ranking ([Google Business Profile Help](#)).

Google Business Profile setup

- Business name exactly "Vic Cameleers". No keywords stuffed into the name (that risks suspension).
- Service-area business: hide the home address, set service areas to the suburbs actually served (up to 20).
- Primary category: Moving company. Secondary: Mover, Furniture removal service (pick only ones that are true).
- Add every service with a short description and the \$120/hour price.
- Hours, phone 0481 950 085, website link to the real domain with UTM tags so Vercel Analytics shows GBP traffic.
- Upload 20+ real photos before asking for reviews: both trucks (outside and inside), the crew in uniform, loading a real job, blankets and gear. Add new photos every week.
- Post a Google update weekly: a job done, a moving tip, a seasonal note (end of financial year, end of lease season).
- Turn on messaging and answer within an hour.

Reviews: the single biggest lever

- Goal: 20 reviews in 60 days, 50 in 6 months, then steady 8 to 10 a month.
- Send a text the same evening of every job with the direct Google review link. Short and personal: "Thanks for having us today, [name]. If we did a good job, a quick Google review really helps a small local crew: [link]. Cheers, [crew name]."
- Ask customers to mention the suburb and what was moved. Review text helps relevance.
- Reply to every review within 48 hours, mentioning the suburb and service naturally.
- Never buy reviews, never review-gate (only asking happy customers through a filter), never offer discounts for reviews. Google removes them and can suspend the profile.
- Add the live Google rating to the site with `AggregateRating` schema only once real reviews exist, and only on pages that show them.

Citations (directory listings)

Same name, phone and area on every one. Start with: Word of Mouth (Man With A Van uses it), hipages, Oneflare, Airtasker business profile, Yellow Pages, True Local, Hotfrog, StartLocal, Yelp AU, Bing Places, Apple Business Connect, Facebook page, Instagram, ProductReview.com.au. Track them in a spreadsheet with login details.

Local links (prominence)

- Casey Business network and Cardinia business events.
- Real estate agents and property managers in Cranbourne, Clyde North and Berwick: offer a "recommended mover" discount for their tenants. One agent link is worth more than 50 directory links.
- Sponsor a local junior footy or cricket club (they list sponsors with links).
- Storage facilities, cleaners and end-of-lease cleaning companies for cross-referrals.
- Check eligibility for the Australian Furniture Removers Association (AFRA). A trade body badge builds trust and a link.
- Local media: the Cranbourne camel story is a genuinely pitchable local news angle.

Design and visuals: getting rid of the AI slop feel

The palette is actually a strong start (sand #f5efdd, terracotta #d5673f, navy #1b3a5c fits the outback camel story), but the layout is the default shadcn/Tailwind template, so it reads as generated. The fix is real photos, one strong idea carried through, and cutting repeated sections.

What currently looks AI-made

- **No photos at all.** Zero images on the homepage. A mover with no trucks on screen looks fake instantly.
- **Repeated sections.** "How it works" (4 steps) and "From booking to moving day" (4 steps) say the same thing twice. "The Vic Cameleers difference" and "Why people choose us" repeat the same 3 to 4 points (local crew, transparent pricing, fleet).
- **Template tells:** identical 3-column icon cards with hover lift, 01 02 03 04 numbered steps, Lucide line icons everywhere, rounded-lg cards on cream, Oswald + Inter (the most common "bold local business" pairing), generic headline "Move house without the moving-day chaos".
- **Filler copy patterns:** "no surprises" appears 4+ times, "real crew, real trucks", "not a call centre", "we'd rather show you what we can back up". Once is charming, repeated it sounds like a template.

Visual direction: "Outback freight, modern Melbourne"

Lean into the one thing nobody else has: the cameleer story.

- **Photography first.** Hero = a real wide photo of their 10 tonne truck on a Cranbourne street at golden hour, crew loading. Shoot on a phone in good light: truck exterior, truck interior strapped load, blankets and trolleys, crew faces, hands carrying a couch through a door, a finished room. 30 to 40 photos in one afternoon covers the whole site.
- **Brand the trucks.** If the trucks are not wrapped yet, even simple vinyl lettering with the logo and phone number makes every job a billboard and every photo on-brand.
- **Typography with character.** Swap Oswald for a condensed slab or a stencil-style display face that feels like freight crate lettering (e.g. "Barlow Condensed" for UI plus a slab like "Zilla Slab" or "Roboto Slab" for headlines), or pay for one distinctive display font. Keep body text simple.
- **One signature graphic element.** A hand-drawn style camel route line or dotted "caravan track" that runs between sections and ends at the quote button. Commission a simple custom camel logo mark from a real illustrator (Fiverr/99designs with a clear

brief), not an AI icon.

- **Texture, not gradients.** Subtle paper grain or kraft-cardboard texture on the sand background, like a moving box. Stamp-style labels ("FRAGILE", "THIS WAY UP") used sparingly as section tags.
- **Asymmetric layouts.** Break the 3-card grid: a big photo left with the price calculator overlapping it, a full-bleed truck photo band, a crew strip with names.
- **Price calculator as the hero.** Pull it into the first screen next to the headline. It is the best thing on the site.
- **Mobile first.** Most removalist searches are on phones. Sticky bottom bar with Call and Quote (already there), large tap targets, calculator usable one-handed.

Copy direction

- Write like the brother talks on the phone. Short, direct, Aussie, a bit of humour. Read it aloud; if it sounds like a brochure, rewrite it.
- Replace the headline with something only they can say, e.g. "Carrying Melbourne's load since 1860. Well, the camels were. We've got trucks now."
- Say "no surprises" once. Show it instead: a real invoice example with the maths.
- Name the crew. "Your movers today: [name] and [name]" beats "professional crew".

90-day roadmap

Week 1 is all plumbing and costs almost nothing. Everything after that is reviews, photos and real local content, done steadily.

When	Who	Task
Week 1	Raghav	Buy .com.au domain, connect in Vercel, 301 from vercel.app, fix site URL env var, canonical tags, OG tags, remove draft notice, remove admin path from robots.txt, fix double brand in titles
Week 1	Raghav	Set up Google Search Console + Bing Webmaster Tools, submit sitemap, request indexing of homepage, pricing, 8 core suburb pages
Week 1	Brother	Create and verify Google Business Profile, fill every field

When	Who	Task
Week 2	Brother + crew	Photo day: 30 to 40 real photos of trucks, crew and gear
Week 2	Raghav	Design overhaul (Prompt 2) using the real photos
Weeks 2 to 3	Raghav	SEO content rebuild (Prompt 1): 8 real suburb pages, new service pages, schema upgrades, static rendering
Weeks 2 to 4	Brother	Review text after every job. Goal: first 10 reviews
Weeks 3 to 6	Raghav	15 directory listings with identical NAP
Weeks 4 to 8	Brother	Visit or call 10 real estate agencies and property managers in Cranbourne, Clyde North, Berwick
Weeks 4 to 12	Both	1 job story or crew post per week, 1 Google post per week
Week 8	Raghav	Check Search Console: which queries show impressions? Double down on suburbs that are close to page one
Week 12	Both	Target: 20+ reviews, Maps 3-pack in Cranbourne, top 10 organic for 3+ suburb terms. Add next 4 suburb pages

What to track

- Search Console: impressions, clicks, average position for "removalists [suburb]".
- Google Business Profile: calls, website clicks, direction requests.
- Vercel Analytics: quote form submissions by source page.
- Review count and average rating, weekly.

Prompt 1: SEO and content build

Paste this into Claude Code (or any coding agent) with the repo open. Replace the bracketed items first. Run Prompt 1 before Prompt 2 so the design work lands on a correct technical base.

You are a senior technical SEO engineer and local-SEO specialist working in the Next.js (App Router) codebase for Vic Cameleers, a removalist company based in Cranbourne VIC, serving Greater Melbourne. Victoria only, no interstate. Phone 0481 950 085. ABN 43 805 185 060. Rate \$120/hour, 2 hour minimum, 45 minute call-out. Fleet: one 6 tonne truck (2 movers) and one 10 tonne truck (3-4 movers). Hosted on Vercel.

Production domain: [https://www.DOMAIN.com.au]

Google Business Profile URL: [GBP_URL or leave empty]

Social URLs: [FACEBOOK, INSTAGRAM or leave empty]

Goal: make the site technically perfect for Google and turn the local pages into genuinely useful, non-templated pages so it can rank in the top 3 for "removalists [suburb]" in the Casey and Cardinia corridor and eventually for "removalists Melbourne".

Work in this order. After each phase, run the build, show me a summary of changed files, and wait for my OK before the next phase.

PHASE 1: Technical fixes (must do)

1. Find every place the site URL is built (metadataBase, sitemap.ts, robots.ts, JSON-LD, OG). Replace hard-coded or fallback localhost values with a single SITE_URL constant read from process.env.NEXT_PUBLIC_SITE_URL, and make the build FAIL in production if it is missing or contains "localhost".
2. robots.ts: allow all, disallow /api/ only, point Sitemap to SITE_URL/sitemap.xml. REMOVE any line that names the admin route. Instead protect the admin route with auth middleware, return 404 when not authenticated, and add X-Robots-Tag: noindex, nofollow on it.
3. Add a self-referencing canonical (alternates.canonical) to every route via generateMetadata.
4. Fix the title template so the brand appears once. Titles under 60 chars, format: "[Primary keyword] | From \$120/hr | Vic Cameleers".
5. Add Open Graph and Twitter card metadata to every route, with a default og:image at /og/default.jpg (1200x630) and per-page overrides.
6. Add a vercel.json or middleware 301 redirect from vic-cameleers.vercel.app to the production domain, and from non-www to www (or the reverse, pick one).
7. Remove every public-facing draft notice, placeholder sentence, or "coming soon" copy. List each one you removed.
8. Make all marketing pages statically rendered (SSG or ISR, revalidate 86400). Currently every page returns cache-control no-store. If the nonce-based CSP forces dynamic rendering, move the nonce CSP to only the routes that need it (quote form, admin) and use a static CSP with hashes elsewhere. Keep all existing security headers.

9. Sitemap: include only indexable pages, real lastmod dates from content, exclude noindexed pages.
10. Check that FAQ answers are present in server-rendered HTML, not only in JSON-LD.
11. Run Lighthouse on home, pricing, one suburb page, one service page on mobile. Target LCP < 2.5s, CLS < 0.1, INP < 200ms. Fix what fails.

PHASE 2: Structured data

1. Replace the current MovingCompany JSON-LD with a full one: name, url, logo, image (array of real photos), telephone, priceRange, taxID, address (addressLocality Cranbourne, postalCode 3977, addressRegion VIC, addressCountry AU, no street since it is a service-area business), geo, openingHoursSpecification [ask me for hours], areaServed as an array of City objects for every suburb page that exists, hasOfferCatalog listing each service with the hourly price, sameAs with GBP and socials.
2. Add BreadcrumbList on all inner pages.
3. Service schema on each service page, provider = the MovingCompany @id.
4. FAQPage only where the Q&A is visible on the page.
5. Article schema on guides with real datePublished and author (a real person's name).
6. Do NOT add AggregateRating or Review schema until real reviews exist. Leave a clearly named TODO flag.
7. Validate everything and report any errors.

PHASE 3: Local pages that are not doorway pages

Google's spam policy treats near-identical city pages that funnel to one page as doorway abuse. Every suburb page must carry content that is true and specific to that suburb.

1. Restructure suburb data into one content file per suburb (e.g. content/suburbs/clyde-north.mdx) with frontmatter: name, postcode, council, driveTimeFromCranbourneMins, housingNotes, accessNotes, parkingNotes, nearbySuburbs, featuredJobs[], reviews[], photos[], published (boolean).
2. Only suburbs with published: true get built, linked, and put in the sitemap. Others return 404 or are noindexed.
3. Build a richer suburb page template with sections that render only when the data exists: local intro, drive time, what moves here are usually like (housing and access), a recent job (story + photo + truck + hours + price), reviews from that suburb, services offered, nearby suburbs, local FAQ (2-3 questions unique to that suburb), quote CTA pre-filled with the suburb.
4. Create the content files for these 8 first, and write the local sections as clearly marked drafts for me to fact-check (in the content file, NOT on the live page): Cranbourne, Cranbourne East, Cranbourne North, Clyde North, Berwick, Narre Warren, Officer, Pakenham. Do not invent job stories, reviews

or statistics. Leave those arrays empty with a TODO.

5. Set every other existing suburb to published: false until I fill it in.

PHASE 4: New pages and internal links

1. New service pages: piano removals, pool table removals, Facebook Marketplace and Gumtree pickups, end-of-lease moves. Each 600-900 words, specific, with a price example using the real \$120/hr maths, FAQ, and links to 3 relevant suburbs.

2. Rewrite the "How much does a removalist cost in Melbourne" guide into the strongest page on the site: a table of example jobs by home size and truck, the calculator embedded, what changes the price (stairs, parking, distance, packing), and how hourly compares to fixed price.

3. Add a /crew page and a crew content type (name, role, photo, short bio in their own words). Leave data empty for me to fill.

4. Change all guide dates to real publish dates. Add a real author name and a short author bio.

5. Internal linking: each suburb page links to 2-3 services and 3-5 neighbouring suburbs; each service page links to the quote page and the 4 closest suburbs; each guide links to the quote page and one service. Descriptive anchor text, no "click here".

6. Make the reviews page show the Google rating widget or a "review us on Google" CTA with the GBP review link instead of an empty state.

PHASE 5: Measurement

1. Add UTM-tagged links for the Google Business Profile website button.

2. Track quote form submissions and phone link clicks as Vercel Analytics custom events, with the page path as a property.

3. Output a checklist for me: Search Console setup, sitemap submission, URL inspection of the 10 key pages, Bing Webmaster Tools.

Rules

- Australian English spelling (colour, organise, metres).
- No em dashes anywhere in site copy. Plain, human, conversational Australian tone. No filler like "seamless", "hassle-free", "look no further", "stress-free", "your trusted partner".
- Never invent reviews, ratings, customer names, job counts, years in business, awards or statistics.
- Do not add keyword-stuffed text, hidden text, or city lists in the footer.
- Keep all existing security headers and the Turnstile/Resend/Upstash integrations working.
- Every change must be production-safe. Show diffs for anything touching middleware, CSP, or the admin route.

Prompt 2: Design and visual overhaul

Run this after Prompt 1 is merged and after the photo day, with the real photos dropped into `/public/photos/`. Without real photos, no prompt can stop it looking generic.

You are a senior brand designer and front-end engineer. Redesign the Vic Cameleers Next.js site (Tailwind + shadcn/ui) so it looks like a real, hands-on Melbourne removalist crew with a strong identity, and nothing like a generic AI-generated template. Keep all routes, content structure, SEO metadata, schema, analytics and security headers from the previous work untouched.

Brand story to build the whole look around

In 1860 camels and cameleers landed at Port Melbourne to haul supplies for the Burke and Wills expedition, and for decades carried loads across Australia. Vic Cameleers is a modern Cranbourne crew carrying that same reliability. Visual theme: "outback freight, modern Melbourne". Think stencilled crate lettering, kraft cardboard, moving blankets, dusty desert tones, freight labels, not cartoon camels or safari clichés.

Real photos available in `/public/photos/`: [LIST FILES: e.g. truck-10t-side.jpg, truck-6t-rear.jpg, crew-loading-couch.jpg, crew-team.jpg, truck-interior-strapped.jpg, blankets-trolleys.jpg, ...]. Use ONLY these. Never use stock photos, AI images or placeholder illustrations. Convert to next/image with correct sizes, AVIF/WebP, descriptive alt text and descriptive file names.

Design system

1. Palette: keep the existing sand (#f5efdd), terracotta (#d5673f / #c1502e) and navy (#1b3a5c) as the core. Add one kraft brown and one warm off-black. Define as CSS variables/tokens with light and dark variants. Check WCAG AA contrast on every text/background pair.
2. Typography: replace Oswald + Inter. Headlines in a characterful slab or condensed display face that feels like freight stencilling (propose 3 Google Font pairings and pick the best, e.g. Zilla Slab or Roboto Slab headlines with Barlow or Public Sans body). Tight, confident type scale. Use tabular numbers for prices.
3. Texture: a subtle kraft/paper grain on sand backgrounds (small SVG noise or tiny tiled image, under 20 KB). No gradients, no glassmorphism, no glow, no blurred blobs.
4. Signature element: a dotted "caravan route" line (SVG) that threads down the homepage between sections and ends at the quote CTA. Freight-label style section tags (small uppercase stamps like "LOAD 01", "THIS WAY UP") used

sparingly.

5. Icons: drop the generic Lucide icons in content sections. Use photos instead, or a small custom set of hand-drawn style line icons in one consistent stroke. Lucide is fine only for UI (menu, phone, chevrons).

Layout rules (anti-template)

- No identical 3 or 4 column icon-card grids. No hover-lift cards. No "01 02 03 04" step badges.
- Asymmetric, editorial layouts: large photo + overlapping content panels, full-bleed truck photo bands, varied section widths.
- Merge duplicated sections: combine "How it works" and "From booking to moving day" into one; combine "The Vic Cameleers difference" and "Why people choose us" into one section built around photos of the actual crew and trucks.
- Homepage order: (1) hero with real truck photo, short headline, and the price calculator visible in the first mobile screen; (2) proof strip: ABN, fleet, Cranbourne base, Google rating once real; (3) services as a photo-led list, not cards; (4) "Meet the crew" strip with names and faces; (5) the cameleer story with the 1860 history, a real archival-style treatment; (6) the fleet with real truck photos and what fits in each; (7) where we move, with a simple map of the south-east corridor; (8) FAQ; (9) final CTA.
- Suburb and service pages: photo-led hero specific to that page when a photo exists, calculator pre-filled with the suburb.

Copy pass

- Rewrite headlines and microcopy in a plain, direct, slightly humorous Australian voice, as if the owner is talking on the phone. Read everything aloud; if it sounds like a brochure, rewrite it.
- Say "no surprises" at most once on the whole site. Cut repeated phrases like "real crew, real trucks" and "not a call centre" down to one use each.
- Banned words: seamless, hassle-free, stress-free, look no further, elevate, unlock, tailored, cutting-edge, your trusted partner, peace of mind.
- No em dashes. Australian English.
- Propose 5 hero headline options that only this business could say, using the camel story, and pick one. Example tone: "Melbourne's been moving with cameleers since 1860. We just swapped the camels for trucks."

Mobile and performance

- Design mobile first (most removalist searches are on phones). Sticky bottom bar with Call and Get quote. Tap targets 48px minimum. Calculator usable one-handed.
- Keep LCP under 2.5s on mobile: hero image priority-loaded, fonts self-hosted with font-display swap, no layout shift from the texture or route

line.

- Respect prefers-reduced-motion. Motion only where it helps: the route line drawing in on scroll, a small truck icon moving along it. Nothing else animates.

Accessibility

- Semantic headings (one h1 per page), visible focus states in the brand colour, alt text that describes the actual scene, form labels on every quote field.

Process

1. First, output a short design brief and a moodboard description (palette tokens, font choice with reasons, 3 layout sketches in words) and wait for my OK.
2. Then build the design tokens and base components.
3. Then redesign the homepage, show me, wait for feedback.
4. Then apply to pricing, services, suburb pages, about, guides, quote, contact.
5. Finish with a Lighthouse mobile report and a list of every section you merged or removed.
